AN

ARGUMENT

UPON THE

Woollen Manufacture

OF

GREAT-BRITAIN.

GENERAL Infatuation has of late Years seiz'd this Country. We court our Ruin, in every Instance, more eagerly, than other Nation seek their

Interests.

The Interests of England, as they are now understood, are the Interests of Particulars against the Publick.

There is no fettled Interest, no National

Interest. It is private, local, personal.

Thus our Maxims are grown absurd, arbitrary, and contradictory in their own Nature.

A 2

And

And our Conduct (the Result of these Maxims) such as runs counter to the very first Lights of Human Reason, passionate, violent, and oppressive to the Minor Part of the Society, calculated by the Major, sot-

tishly also, to their own Ruin.

From having been bought out of our Reason in grand Instances, it is grown a National Habit to neglect the Use of it in all, and, from having been at first accustomed to part with it to our private Interest, it has sted so far from us, that we have the Use of it no longer to direct us truly to any one Interest of the Publick.

England hath no Mines of Gold, or Silver, or of Precious Stones. Its only Riches

are its Trade.

Trade cannot exist under heavy Taxes: Yet our Taxes are double what they are in France, even in the Times of hottest War.* They pay, at this Hour, under Eleven Shillings per Head: We, in Time of Peace, above Twenty.

Trade cannot exist in a Country where the Price of Land is excessive dear, when the Trade of that Country principally arises from its own Product. — Our Trade arises from our own Product, and our Land

^{*} This Paper was first Published in March 1735, before the Peace was concluded.

is dearer than in any Part of Europe (excepting Holland, whose Commerce does in no Sort depend upon it.)

Our Trade therefore cannot exist, unless our Taxes be diminished—Or unless we reduce the Price of our Lands.—Or turn our Commerce upon Foreign Product.

We have no Hope to see our Taxes sufficiently diminished.——The false Interest of Particulars will never suffer the Second to be effected, till it effects itself; before which our Commerce will be lost.—
We have therefore nothing else to do, than to turn our Commerce upon Foreign Product; that is, the Product of Countries where Things are cheaper than they are with us

Foreign Product is proper or improper, Improper Foreign Product, is the Commodity, or Manufacture of another People, entirely distinct from us in Point of Government, and in Point of Interest. Proper Foreign Product (a wrong Term in itself, but used here to humour the narrow Notions of the Times) is the Product of Colonies, or Countries united to us, or dependent on us.

Commerce, founded upon improper Foreign Product, is very expedient, and very profitable. Commerce, founded upon proper Foreign Product, is more expedient, more profitable and more certain

fitable, and more certain.

Commerce, in improper Foreign Product, imploys an infinite Number of People in Navigation: Its principal Profits arise upon Freight, and upon prudently buying in cheap Times, to sell again in dear. The Commerce of Holland is, in great Part, of this Kind, The Commerce of the Genoese was antiently the same.

But Commerce of this Kind may lose its Channel, and suffer by many Accidents; and, with respect to particular Countries, be ruined by the Wisdom of the opposite Government. The Profits of it must be less, because the Nations you deal with being the Root of the Commerce, must have a great Share in the Gain.

But Commerce founded upon proper Foreign Preduct (or the Product of your own Colonies, Countries united to you, or in Dependance on you) is a Natural Commerce, and ought to be as tenderly treated, and as much indulged, as that of the Mother Country; having no Difference from Her's, but as She is resolved to make a Difference. It cannot easily be destroyed but by oppressing and distressing such a Country; and Oppression and Distress will ruin Commerce whereever it meets with it

Its Profit is infinitely greater: For as the Roct of that Commerce is our own, the whole of the Gain is our own also. The main

main of the Profit settles with us; so much only remaining in the Colony, as may be sufficient to draw in more.

Great-Britain therefore has no better Choice, than to ground our Commerce on the Industry and Product of her Colonies, and Countries united to her, or dependent on her. And yet her Maxims, with regard to all these Countries, have been violent, and

contradictory to their own Intention.

Course of Things, which requires every Man to make the best Advantage of the Product of his Land.—Because grounded upon manifest Force; upon Laws made upon a People who have never consented to them.—Because they cramp the Trade of those Countries—And because—That to forbid the Export of any Commodity to another Country, is to command it to be sold at your own Price, to your selves, which is nothing better than downright Robbery.

Contradictory to their own Intention, because they manifestly produce the Ruin of the Commerce of England, which they affect

to Support.

It

The Reflections that arise on a violent, and contradictory Conduct, with respect to

Government, are these;

That such a Conduct must in the End destroy our Constitution.

Body of our Fellow-Subjects, who envying our superior Privileges, will be ever ready to seize Occasion to abridge them, and to reduce us to their own Level of Ruin.

2. By obliging us to govern the People it is exercised upon, by a military Force; which Force may be as well employed a-

gainst our Liberties as theirs.

With Respect to Commerce, which is more immediately to our present Point, such a Condust must entirely confound it.

1. Because a lively Commerce is incompatible with a Government by Force: New People will never settle in such a Country, the old Inhabitants will fall from it.

2. Because no kind of Manusacture, or Branch of Trade will flourish, where any is prohibited; for Men are never satisfied, but that the Power which has abolished one,

may deprive them of any other.

The Genius of Trade sickens under the Restection of a bare Possibility of Restraint; and therefore must grow very languid upon Restection, on an actual Restraint, a Restraint rendered perpetually present, although but by a single Instance.

Thus must the Conduct and Maxims of Great Britain, with Regard to her Colonies, Countries united to her, and dependant on

ber,

But it has been proved, and is evident, that her own cannot exist, without it now founds itself upon the Commerce of those Countries.

It follows, therefore, that the present Conduct and Maxims of Great Britain, with Respect to the Commerce of those Countries, if pursued farther, must ruin her own Trade.

The General Conclusion upon the whole is this, that Great Britain for the future, must change their Conduct with respect to these Countries.

Ireland is the chief of these Countries.

She must therefore chiefly change her Condust with regard to Ireland.

As a Merchant in his particular Sphere, employs the cheapest Manufacturer he can find; so England in her general Merchandize, must employ the Poor of Ireland, and the Product of Ireland as the cheapest she can find.

And as Men pour Water into Pumps, which once set moving, throw up Water in Return, as long as they require; in like Manner must England give Encouragement to Ireland; which Encouragement will render infinite Returns.

England has never exercised her Power over Ireland, but she has suffer'd for it.

It is demonstrable in two Instances, which are the Principal in which she has done it.

2.1656.

I. The Act to prohibit Irish Cattle.

II. The Destruction of the Woollen Ma-

nufacture of that Kingdom.

The first is generally now allowed destructive. The second begins, by its fatal Consequences, somewhat to open the Eyes

of Men.

It was also seen in a third Instance; the Prohibition of importing certain Commodities directly from the Plantations to Ireland, without touching first upon England. But this Prohibition was lately taken off, after that Nation had laboured under the Restriction half a Century. During this Law, the Price of those Commodities, Pitch, Tar, &c. were so raised by that Difficulty, that Ireland paid 100,000 l. per Aun. to foreign Nations, for what they might have had, and now have from our own.

The Consequences of the Destruction of the Woollen Trade in Ireland were: 1. The Expulsion of 20,000 Manufacturers at once from that Country. 2. Their Retreat into Foreign Countries. 3. The Establishment thereupon of the Woollen Manufacture in almost all Parts of Europe. 4. The Exportation of English and Irish Wooll. 5. The

From these Consequences we ought to observe, that the Decay of our Trade does not arise from the Exportation of Irish Wooll.

That were to make an Effect a Cause.

To ascribe the Missortune of the Retreat of Manusactures from Ireland, and the E-stablishment of Foreign Manusactures, as a Cause, would be equally wrong.

The vain Expettation of engroffing the Woollen Manufacture to ourselves; the narrow Principles we have spoken of above.

— Principles, which, in proving too much, prove nothing but their own Absurdity.

The Argument which proves that any one Branch of Trade should be confined to any one Part of these Dominions, exclusive of the rest, will tend to prove that even that Part should be again divided to the Prejudice of a Part of itself. Thus, if Great Britain should argue that Ireland should have no Trade in Wooll, the rest of Great Britain may argue that Yorkshire ought to be excluded too. And thus we may argue down the Manusacture, by a Parity of Reasoning, into one County, into one Town, into one House in that Town, and to one Manusacturer in that House.

And

And furely, that Argument which proves that the Woollen Manufacture of Great Britain would be most advantageous when there was but one Man employed in it, will hardly be allowed a good one. No! let us open our Minds: Let us think in a more generous Manner: Let us think that all Men have an equal Right to Liberty, and to all the Advantages of human Nature with ourselves: Let us consider, if Power could take away the Natural Rights of Mankind, what Right would now remain to ourselves of Freedom? Let us credit this Truth - That Nations are only powerful, in Proportion as they are united: And, let us understand, that no People can be united, where equal Liberty, and equal Advantages are not permitted.

Monopolies are destructive to a State.

Kingdoms may admit of Monopolies as well as private Companies; and the most borrid Monopoly of all is, where, in a Kingdom composed of many different States, one State is suffered to assume, or engross any particular Advantage, to the Exclusion of the rest.

Such Monopolies are not found in absolute Monarchies, even in the worst of Governments: But absolute Monarchies are the only Governments in which they may be suffered.

of

They cannot be maintained without Force; and Force may be allowed in absolute Governments, because no Liberty can be loft: But where Liberty can be loft, Force cannot be permitted, but it will be loft.

The Liberty therefore of Great Britain, depends upon the Freedom of the People of

Ireland. And,

The Commerce of this Kingdom has been proved to depend upon their Liberty in Trade: What then should give us Cause to hefitate, in granting them every Advantage with ourselves? Is it that they are a distinct Government, and that this Circumstance renders it unsafe? But they complain, that our Laws have Force among them. ---- If not, unite them: Give them an equal Representative: Make them the same People: The fame Constitution must take away all Objection, if there should be any now. it the Fear of being underfold by them, that prevents this great Design? Whose Fear can this be? It cannot be the Fear of the Publick, for it is well known, that every Thing gained by Ireland, must center here at last.

It cannot be the Fear of the Publick, because (as we have proved) nothing but the Encouragement of their Trade, can fave our Commerce. It must then be the Fear of private Men: And of what private

Men?

are

may

Men? Those, whose Estates arise from Wooll; those, who manufacture Wooll. These imagine their Estates must fall upon such a Change: That the Price of their Labour will diminish.—But their Estates are now raised too high to suffer any Commerce to thrive, or to continue in our Fa-

vour; and their Labour is too dear.

If they will have Commerce then, they must suffer their Estates to fall, their Labour to lower its Price: If they will fuffer no Commerce, their Estates will produce them nothing. - Their Labour will not be wanted. Which is then better? that their Estates should lower in their Value, or that they should produce them nothing? -That their Labour should fall in Price, or that they should never labour? They have ruined their Estates, and their Labour, by pushing up their Value. They must save them by bringing them down. Had England no other Cause for Ruin, her Commerce, as it has been lately managed, would have ruined her? She has fattened with too much Precipitation, and there is a ne plus ultra in all Nature.

This Truth is more evident in Trade, than in any other Thing. For that low Price of Commodities and Labour, which is the Foundation of it, is changed into the

very contrary by its Continuance.

Little States may therefore soon be gorged by advantageous Traffick, and soon be ruined by it. Great Countries have this Advantage; as they rise slower, so they fall later. But England, in the Management of her Commerce, has lost this Advantage, which was natural to her; by confining Commerce to herself, she is, in Effect, to be considered but as a little Country. And, like a little Country, has been quickly ruined by it.

To have avoided this, she should have admitted equal Profits to Ireland, that she might have grown up with her: And to recover this Error, she must act upon the same Principle; she must submit to reduce herself: If she does not, she will be more

feverely reduced by other Means?

Let the Interests of private Men, therefore, no longer blind the Publick. But these are not the Interests of private Men; they are false Principles, which the Selfishness of the Times renders favourably to the

Majority.

Is it the Interest of private Men, to neglect a certain Profit, for imaginary Gain? For Gain impossible? For Gain, if possible, yet destructive? A Nation circumstanced like ours, has been already proved incapable of engrossing Commerce to the Exclusion of its Colonies. And such a Commerce, if obtained, has been proved destructive: But to admit Ireland to a Freedom in Commerce; must be certain Gain: For Ireland would gain by a Freedom of Commerce. And what Ireland gains, must center here. Ay, but this must come out of some Branch of our own Manufacture. As suppose their Gain on the Woollen Manufacture. This Gain must come out of our Woollen Manufacture.

Can we keep our Manufactures as we

are?

If we can—Why fo much Noise and Clameur upon the Subject? Why such Complaints of Manusacturers? Applications to Parliaments, and Committees appointed to consider these Complaints and Applications? Why Bills brought in for many Years together to secure it it?

of the Irish be out of the Manufacture of England? The Gain of the Irish must be out of the Woollen Manufacture of those Countries which will succeed Us in it: And who will succeed Us in it? Or rather, Who has already got it from us? France

in the principal Part.

The Gain of the Irish, then, in the Woollen Manusacture, must be a Gain upon the Manusacture of France. the Ga for

If

If to paint the Woollen Trade to Ireland, be a Gain upon France; to probibit the Woollen Trade to Ireland, must be a Gain to France: And shall a Briton argue for the Gain of France?

Could the Irish recover the Woollen Trade? Rather, can We recover it any other Way? If we can, Why have we never taken that Way?—If we cannot, shall we refuse to make this Experiment? But the Irish can recover the Woollen Trade; I. Because they can undersel our Rivals in that Manusacture. II. Because if they manusactured at home, they would export no Raw Wooll, or Woollen Yarn, to Foreign Manusacturies; and without Wooll, or Woollen Yarn, of their Growth, those Manusacturies cannot exist.

As to the first it is evident, that the Irih do it: They have a clandestine Trade in Stuffs to Lisbon: The French Trade thither also, and so do We, in the same Commodities. The Irish undersel both the French and Us.—The English Manusacturers complain of this clandestine Trade.—The French distike it with more Reason: For, if it were possible to prevent it, and it were prevented, the French would come into the Place of the Irish; but the English would be undersold as much as ever.

B

[18].

As to the second Argument, that if the Irifb were allowed the Manufacture of Wooll, they would export no Wooll, or Woollen Yarn to France.

This is evident from the Nature of the Thing; Men study their Profits, and this would be manifestly against their Profit.-Wooll manufactured is worth five Times as much as Wooll unmanufactured; and therefore to fell their Wooll abroad, would be a Loss to them, unless they fold it for five Times what they fold it for at home. And if they who bought it, gave but one Third of that Price, they could not use it when they had bought it.

This all Ireland must see, and therefore unite to prevent it; whereas it is feared that all Ireland now finds it its Interest to

promote it.

Impeach this Argument. - Allow fome Wooll and Yarn would still be run; would not the Quantity be extremely less? Being less, would it not be dearer? Would not the Manufactures arising out of that Commodity, in Consequence diminish in Quantity, and augment in Price? -And what other Method can be taken, better to destroy a Rival Manufacture, than to diminish its Quantity, and augment its Price ?

To

To pursue the same Question: - Is it doubted that the Irifb Wooll and Yarn be necessary to the Manufactures of France? We are told by all who are conversant in this Bufiness, that they cannot carry on the Trade without them. They may make very coarse Cloths with their own Wooll, which may serve in some Degree, for ordi-They make the nary bome Consumption. finest Cloths with Spanish Wooll; but the Cloths and Stuffs for Exportation and general Use, are of a middle Sort, and cannot be made without a Mixture of Irish Wooll. -This we are told .-- This the French have acknowledged in the most publick Manner. But if we were not told it, and if it were not acknowledged, is it not felf-evident?

I. Do not the French consume greater Quantities, at far greater Price, than their own Wooll and Woollen Yarn can bear? Would they act so wild a Part as to do this, if it were not necessary to their Manusacture?

II. Do not the very Manufactures of England depend, in some Measure, on the Woollen Yarn of Ireland?---If they do! the Manufactures of France must do it in a much higher Degree: For the Wooll of France differs far more than the Wooll of England, from the Wooll of Ireland. But whether they do, enquire of the Manufacturers

turers of Bristol, and of those of Norwich; they will tell you that they cannot work without it.

To reduce also this Argument below its full Force; not that we may fuit it more to Reason; but that we may render it less Obnoxious to Prejudice and Passion, --- Let us suppose it only strong in Part. -- Let us suppose the Wooll of Ireland necessary only to France, for such Manufactures as it is necessary to in England .-- Would not the Woollen Manufacture established in Ireland confound the Commerce of France, for fo much? Is not this Species of Manufacture a very confiderable Branch of the Woollen Trade ?-- Would not therefore the Establishment of the Woollen Trade of Ireland confound the Commerce of France, in a considerable Branch of the Woollen Trade. As we now stand, are we able to confound it in any Branch ?-- It is allowed we cannot .--If it is allowed we cannot, shall we not employ the People of Ireland who can?

Let me here observe one Circumstance, In whatever Branches of Manufacture the Irish or English Wooll is employed, in France it works up twice as much of the French Wooll: Thus one thousand Stone of Irish or English Wooll produce three thousand Stone of French Manufacture. If the Irish therefore, were now allowed to work up

all their Wooll, they could but Manufacture one third of that Quantity. This is the only Quantity, or only Kind of Cloth in France for Exportation, and the greatest Part of it is employed in Exportation.

All the Cloth of France for Exportation is thus destroyed; yet the Irisb gain but one The Demand third of that Exportation. for Cloth abroad must continue the same .--There must then remain two Thirds of that Demand unsatisfied. — Who can satisfy this Demand? Foreigners cannot, from the Nature of their Wooll. The Irifb cannot, because they have not Quantity sufficient .--The English therefore must.

Thus do the English plainly benefit as much again, by opening the Irish Commerce, as the Irish can do themselves; for of the Ruins of the French Manufacture, two Thirds must demonstrably fall into our

Lap.

As

Thus do we plainly recover the Woollen Trade, and that in a Way, for as short a Time, and in as small a Degree detrimental to the Rents of England, or to the Poor of England, as can possibly be conceived. The greater Demand of the Commodity which must ensue; will keep up the Price of the Commodity, and consequently of our Land. The greater Consumption must employ the Poor.

If

If the Rents of England can be maintained upon the Foot on which they now stand, they will be maintained upon that Foot, by this Expedient, which seems to promise to confine the whole Trade to our own Dominions. If they cannot be maintained upon this Foot, we shall have the Comfort to perceive, after they are once fallen to their due Standard, that they will daily rise upon such Foundation as will maintain them when they are risen.

But on the other Hand, we shall find that no other Scheme can have Effect.—
Our Woollen Manufacture must be totally lost.—The rest of our Trade must sollow.—The Rents of the whole Kingdom will be every where reduced.—A distinct Poverty, a general Distress, an universal Discontent, Faction, Tumult, Civil War, Anarchy and Tyranny will fink us, by a natural Succession into the Circumstances of an Asiatick Province, from which we shall never rise.

I conclude with these Sentiments, altho' they appear, at present, contrary to the

Judgment of the Nation,

I A Nation will not grow Poor by in-

crease of Money.

II. A Nation will not grow rich, by refusing to employ any of her Subjects. III. A Nation will never thrive by Means which have brought her to Ruin.

IV. A Nation may attempt Impossibili-

ties, but will never fucceed.

Post-

POSTSCRIPT.

CINCE the first Publication of this Paper (which was last Year) there hath appeared a Treatife upon the same Subject, intitled, The Golden Fleece. The Accuracy of the Facts contained in it, and the wonderful Sagacity of the Author in his Reasoning upon them, deserve a par-

ticular Attention.

The first Passage I shall observe, is that in which he tells us, That the Wooll of Ireland, produced annually is 300,000 Packs, which at 6 d. per Pound (a Price it has often born there) amounts to one Million eight hundred thousand Pounds, above one hundred thousand Pounds per Ann. more than the whole Rents of Ireland, in every Kind of Produce put together, have ever been before computed at.

In the second Place, Page 14.— We are told, That every Pack of Wooll manufactured in Ireland, over and above the Home Consumption, is almost the same Loss to Great Britain as if manufactured in Foreign Countries. At the same Time, the same Author informs us, That one Pack of Irish Wool will work up two of French, and so produce in the whole three Paoks of French Manufacture.— The Force of this Argument therefore is, although he has declined to give it its full Weight, that it is almost as good for England that France should manufacture three Yards of Cloth, as that Ireland should manufacture One.

The next Discovery is as notable as the rest. ——It is a Secret to recover a Manufacture, ruined from a Load of Taxes, by laying still a greater Tax upon it. ----The Duties upon Hides, Candles, Soap, painted Silks, Starch, &c. amount to more than 500,000%. per Ann. which falling upon every Consumer in the Kingdom, both from Luxury and Necessity, affect all the Manufactures in the Kingdom, and the Woollen in particular, perhaps, in the Proportion of 40 or 50,000 l. — Our Author tells us, that the Charge has destroyed that Trade---which he purposes to recover by taking off these Taxes, and laying

ing the whole Charge of 500,000 l. upon the

Wooll only.

AS to the Author's Scheme of the Register for Ireland — I beg Leave to ask these sew Questions upon it, and I have done—Is his Register proposed to be established by an English, or by an Irish A& of Parliament—— If by an English—— Will he answer for the Execution of it?——— If by an Irish.—— Will he undertake to gain the Consent of that Kingdom to it?
